**Matrix Seat**

Stylite Designs have been successfully using Matrix 2<sup>nd</sup> Generation for a number of years and have especially seen the benefits when used with paediatrics as it can be easily adjusted for growth making it a cost effective method of postural management.

It is the only system in the world that can be used for complete body support systems, back supports, and can enable orthotic spinal correction within the seat.

Its flexible components allow shape changes within the rigid structure, for example, posterior thigh (extensor thrust), flexible lumbar and axilla support

Integral, pressure and shear relieving surface modules, now allow instant support changes.

Advantages compared to other seating systems:

- Allows for changes and growth
- Excellent pressure distribution
- Can be remoulded
- Recyclable
- Multiple cover options available
